

A. Token failure: one distribution, two readings

model expressed: 101 value bins

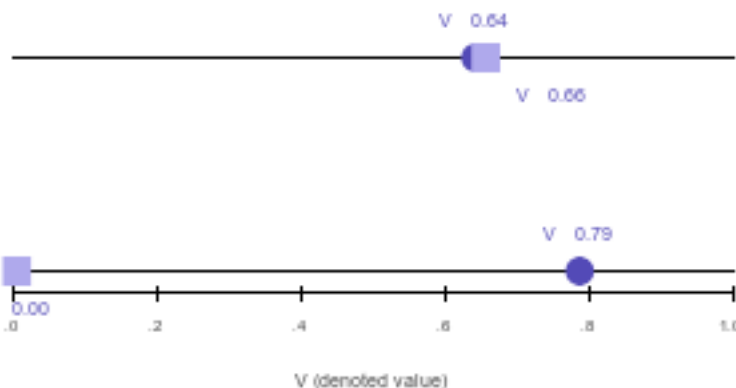

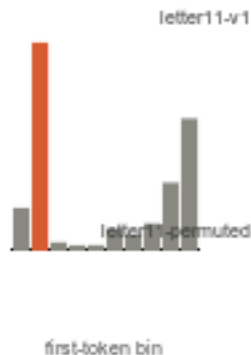

1 15 100 → shared first token "1"

the model expressed 101 levels; the readout receives 10

Mistral/Qwen first-token reread: 10 bins

same item; values are in denoted-value space

6/6 cells: Spearman $\rho(V_{v1}, V_{perm}) = -.054 \dots +.067$

same-instrument reliability = .261

• V • V

Llama 3 5B: no token failure, still shows B
